# Mathematics

**Advanced**

**Paper 1: Pure Mathematics 1**

Sample Assessment Material for first teaching September 2017

**Time: 2 hours**

Paper Reference

**9MA0/01**

**You must have:**

Mathematical Formulae and Statistical Tables, calculator

Total Marks

**Candidates may use any calculator permitted by Pearson regulations. Calculators must not have the facility for algebraic manipulation, differentiation and integration, or have retrievable mathematical formulae stored in them.**

## Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B).
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Answers should be given to three significant figures unless otherwise stated.

## Information

- A booklet 'Mathematical Formulae and Statistical Tables' is provided.
- There are 15 questions in this question paper. The total mark for this paper is 100.
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

## Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer cross it out and put your new answer and any working out underneath.

Pearson

Answer ALL questions. Write your answers in the spaces provided.

1. The curve  $C$  has equation

$$y = 3x^4 - 8x^3 - 3$$

(a) Find (i)  $\frac{dy}{dx}$

(ii)  $\frac{d^2y}{dx^2}$  (3)

(b) Verify that  $C$  has a stationary point when  $x = 2$  (2)

(c) Determine the nature of this stationary point, giving a reason for your answer. (2)

2.

**Figure 1**

The shape  $ABCDOA$ , as shown in Figure 1, consists of a sector  $COD$  of a circle centre  $O$  joined to a sector  $AOB$  of a different circle, also centre  $O$ .

Given that arc length  $CD = 3$  cm,  $\angle COD = 0.4$  radians and  $AOD$  is a straight line of length 12 cm,

(a) find the length of  $OD$ , (2)

(b) find the area of the shaded sector  $AOB$ . (3)

(Total for Question 2 is 5 marks)

3. A circle  $C$  has equation

$$x^2 + y^2 - 4x + 10y = k$$

where  $k$  is a constant.

- (a) Find the coordinates of the centre of  $C$ .

(2)

- (b) State the range of possible values for  $k$ .

(2)

(Total for Question 3 is 4 marks)

4. Given that  $a$  is a positive constant and

$$\int_a^{2a} \frac{t+1}{t} dt = \ln 7$$

show that  $a = \ln k$ , where  $k$  is a constant to be found.

(4)

(Total for Question 4 is 4 marks)

5. A curve  $C$  has parametric equations

$$x = 2t - 1, \quad y = 4t - 7 + \frac{3}{t}, \quad t \neq 0$$

Show that the Cartesian equation of the curve  $C$  can be written in the form

$$y = \frac{2x^2 + ax + b}{x + 1}, \quad x \neq -1$$

where  $a$  and  $b$  are integers to be found.

(3)

(Total for Question 5 is 3 marks)

6. A company plans to extract oil from an oil field.

The daily volume of oil  $V$ , measured in barrels that the company will extract from this oil field depends upon the time,  $t$  years, after the start of drilling.

The company decides to use a model to estimate the daily volume of oil that will be extracted. The model includes the following assumptions:

- The initial daily volume of oil extracted from the oil field will be 16 000 barrels.
- The daily volume of oil that will be extracted exactly 4 years after the start of drilling will be 9000 barrels.
- The daily volume of oil extracted will decrease over time.

The diagram below shows the graphs of two possible models.

- (a) (i) Use model A to estimate the daily volume of oil that will be extracted exactly 3 years after the start of drilling.
- (ii) Write down a limitation of using model A. (2)
- (b) (i) Using an exponential model and the information given in the question, find a possible equation for model B.
- (ii) Using your answer to (b)(i) estimate the daily volume of oil that will be extracted exactly 3 years after the start of drilling. (5)

7.

**Figure 2**

Figure 2 shows a sketch of a triangle  $ABC$ .

Given  $\vec{AB} = 2\mathbf{i} + 3\mathbf{j} + \mathbf{k}$  and  $\vec{BC} = \mathbf{i} - 9\mathbf{j} + 3\mathbf{k}$ ,

show that  $\angle BAC = 105.9^\circ$  to one decimal place.

(5)

**8.**

(2)

(2)

**DO NOT WRITE IN THIS AREA**

**DO NOT WRITE IN THIS AREA**

**DO NOT WRITE IN THIS AREA**

**(Total for Question 9 is 5 marks)**

10. Given that  $\theta$  is measured in radians, prove, from first principles, that the derivative of  $\sin \theta$  is  $\cos \theta$

You may assume the formula for  $\sin(A \pm B)$  and that as  $h \rightarrow 0$ ,  $\frac{\sin h}{h} \rightarrow 1$  and  $\frac{\cos h - 1}{h} \rightarrow 0$

(5)

(Total for Question 10 is 5 marks)

**11.** An archer shoots an arrow.

The height,  $H$  metres, of the arrow above the ground is modelled by the formula

$$H = 1.8 + 0.4d - 0.002d^2, \quad d \geq 0$$

where  $d$  is the horizontal distance of the arrow from the archer, measured in metres.

Given that the arrow travels in a vertical plane until it hits the ground,

- (a) find the horizontal distance travelled by the arrow, as given by this model. (3)

- (b) With reference to the model, interpret the significance of the constant 1.8 in the formula. (1)

- (c) Write  $1.8 + 0.4d - 0.002d^2$  in the form

$$A - B(d - C)^2$$

where  $A$ ,  $B$  and  $C$  are constants to be found. (3)

It is decided that the model should be adapted for a different archer.

The adapted formula for this archer is

$$H = 2.1 + 0.4d - 0.002d^2, \quad d \geq 0$$

Hence or otherwise, find, for the adapted model

- (d) (i) the maximum height of the arrow above the ground.  
(ii) the horizontal distance, from the archer, of the arrow when it is at its maximum height.
- (2)

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

12. In a controlled experiment, the number of microbes,  $N$ , present in a culture  $T$  days after the start of the experiment were counted.

$N$  and  $T$  are expected to satisfy a relationship of the form

$$N = aT^b, \quad \text{where } a \text{ and } b \text{ are constants}$$

- (a) Show that this relationship can be expressed in the form

$$\log_{10} N = m \log_{10} T + c$$

giving  $m$  and  $c$  in terms of the constants  $a$  and/or  $b$ .

(2)

Figure 3

Figure 3 shows the line of best fit for values of  $\log_{10} N$  plotted against values of  $\log_{10} T$

- (b) Use the information provided to estimate the number of microbes present in the culture 3 days after the start of the experiment.
- (c) Explain why the information provided could not reliably be used to estimate the day when the number of microbes in the culture first exceeds 1 000 000.
- (d) With reference to the model, interpret the value of the constant  $a$ .

(4)

(2)

(1)

**13.** The curve  $C$  has parametric equations

$$x = 2 \cos t, \quad y = \sqrt{3} \cos 2t, \quad 0 \leq t \leq \pi$$

- (a) Find an expression for  $\frac{dy}{dx}$  in terms of  $t$ .

(2)

The point  $P$  lies on  $C$  where  $t = \frac{2\pi}{3}$

The line  $l$  is the normal to  $C$  at  $P$ .

- (b) Show that an equation for  $l$  is

$$2x - 2\sqrt{3}y - 1 = 0$$

(5)

The line  $l$  intersects the curve  $C$  again at the point  $Q$ .

- (c) Find the exact coordinates of  $Q$ .

You must show clearly how you obtained your answers.

(6)

14.

Figure 4

Figure 4 shows a sketch of part of the curve  $C$  with equation

$$y = \frac{x^2 \ln x}{3} - 2x + 5, \quad x > 0$$

The finite region  $S$ , shown shaded in Figure 4, is bounded by the curve  $C$ , the line with equation  $x = 1$ , the  $x$ -axis and the line with equation  $x = 3$

The table below shows corresponding values of  $x$  and  $y$  with the values of  $y$  given to 4 decimal places as appropriate.

|     |   |        |        |        |        |
|-----|---|--------|--------|--------|--------|
| $x$ | 1 | 1.5    | 2      | 2.5    | 3      |
| $y$ | 3 | 2.3041 | 1.9242 | 1.9089 | 2.2958 |

- (a) Use the trapezium rule, with all the values of  $y$  in the table, to obtain an estimate for the area of  $S$ , giving your answer to 3 decimal places. (3)
- (b) Explain how the trapezium rule could be used to obtain a more accurate estimate for the area of  $S$ . (1)
- (c) Show that the exact area of  $S$  can be written in the form  $\frac{a}{b} + \ln c$ , where  $a$ ,  $b$  and  $c$  are integers to be found. (6)

(In part c, solutions based entirely on graphical or numerical methods are not acceptable.)

15.

**Figure 5**

Figure 5 shows a sketch of the curve with equation  $y = f(x)$ , where

$$f(x) = \frac{4\sin 2x}{e^{\sqrt{2}x-1}}, \quad 0 \leq x \leq \pi$$

The curve has a maximum turning point at  $P$  and a minimum turning point at  $Q$  as shown in Figure 5.

- (a) Show that the  $x$  coordinates of point  $P$  and point  $Q$  are solutions of the equation

$$\tan 2x = \sqrt{2} \quad (4)$$

- (b) Using your answer to part (a), find the  $x$ -coordinate of the minimum turning point on the curve with equation

(i)  $y = f(2x)$ .

(ii)  $y = 3 - 2f(x)$ . (4)

**(7 marks)**

**Notes:**

**(a)(i)**

**B1:** 10750 barrels

**(a)(ii)**

**B1:** See scheme

**(b)(i)**

**M1:** Suggests a suitable exponential model, for example  $V = Ae^{kt}$ ,  $V = Ar^t$  or any other suitable function such as  $V = Ae^{kt} + b$  where the candidate chooses a value for  $b$ .

**dM1:** Uses both  $(0, 16000)$  and  $(4, 9000)$  in their model.

With  $V = Ae^{kt}$  candidates need to proceed to  $9000 = 16000e^{4k}$

With  $V = Ar^t$  candidates need to proceed to  $9000 = 16000r^4$

With  $V = Ae^{kt} + b$  candidates need to proceed to  $9000 = (16000 - b)e^{4k} + b$  where  $b$  is given as a positive constant and  $A + b = 16000$ .

**M1:** Uses a correct method to find all constants in the model.

**A1:** Gives a suitable equation for the model passing through (or approximately through in the case of decimal equivalents) both values  $(0, 16000)$  and  $(4, 9000)$ . Possible equations for the model could be for example

$$V = 16000e^{-0.144t} \quad V = 16000 \times (0.866)^t \quad V = 15800e^{-0.146t} + 200$$

**(b)(ii)**

**B1ft:** Follow through on their exponential model

|              | States that $y = \ln(2x - 5)$ meets $y = 30 - 2x^2$ in just one place, therefore $y = \ln(2x - 5) = 30 - 2x$ has just one root $\Rightarrow f(x) = 0$ has just one root       | A1    | 2.4  |
|              |                                                                                                                                                                               | (2)   |      |

**(6 marks)**

**Notes:**

**(a)**

**M1:** Attempts  $f(x)$  at both  $x = 3.5$  and  $x = 4$  with at least one correct to 1 significant figure

**A1\*:**  $f(3.5)$  and  $f(4)$  correct to 1 sig figure (rounded or truncated) with a correct reason and conclusion. A reason could be change of sign, or  $f(3.5) \times f(4) < 0$  or similar with  $f(x)$  being continuous in this interval. A conclusion could be 'Hence root' or 'Therefore root in interval'

**(b)**

**M1:** Attempts  $x_1 = x_0 - \frac{f(x_0)}{f'(x_0)}$  evidenced by  $x_1 = 4 - \frac{3.099}{16.67}$

**A1:** Correct answer only  $x_1 = 3.81$

**(c)**

**M1:** For a valid attempt at showing that there is only one root. This can be achieved by

- Sketching graphs of  $y = \ln(2x - 5)$  and  $y = 30 - 2x^2$  on the same axes
- Showing that  $f(x) = \ln(2x - 5) + 2x^2 - 30$  has no turning points
- Sketching a graph of  $f(x) = \ln(2x - 5) + 2x^2 - 30$

**A1:** Scored for correct conclusion

| 10       | Use of $\frac{\sin(\theta+h)-\sin\theta}{(\theta+h)-\theta}$                                                                                                                                                                                                                                                                 | B1    | 2.1  |
|          | Uses the compound angle identity for $\sin(A+B)$ with $A=\theta$ , $B=h$<br>$\Rightarrow \sin(\theta+h) = \sin\theta\cos h + \cos\theta\sin h$                                                                                                                                                                               | M1    | 1.1b |
|          | Achieves $\frac{\sin(\theta+h)-\sin\theta}{h} = \frac{\sin\theta\cos h + \cos\theta\sin h - \sin\theta}{h}$                                                                                                                                                                                                                  | A1    | 1.1b |
|          | $= \frac{\sin h}{h}\cos\theta + \left(\frac{\cos h-1}{h}\right)\sin\theta$                                                                                                                                                                                                                                                   | M1    | 2.1  |
|          | Uses $h \rightarrow 0$ , $\frac{\sin h}{h} \rightarrow 1$ and $\frac{\cos h-1}{h} \rightarrow 0$<br>Hence the $\lim_{h \rightarrow 0} \frac{\sin(\theta+h)-\sin\theta}{(\theta+h)-\theta} = \cos\theta$ and the gradient of<br>the chord $\rightarrow$ gradient of the curve $\Rightarrow \frac{dy}{d\theta} = \cos\theta$ * | A1*   | 2.5  |

(5 marks)

**Notes:**

**B1:** States or implies that the gradient of the chord is  $\frac{\sin(\theta+h)-\sin\theta}{h}$  or similar such as

$$\frac{\sin(\theta+\delta\theta)-\sin\theta}{\theta+\delta\theta-\theta} \text{ for a small } h \text{ or } \delta\theta$$

**M1:** Uses the compound angle identity for  $\sin(A+B)$  with  $A=\theta$ ,  $B=h$  or  $\delta\theta$

**A1:** Obtains  $\frac{\sin\theta\cos h + \cos\theta\sin h - \sin\theta}{h}$  or equivalent

**M1:** Writes their expression in terms of  $\frac{\sin h}{h}$  and  $\frac{\cos h-1}{h}$

**A1\*:** Uses correct language to explain that  $\frac{dy}{d\theta} = \cos\theta$

For this method they should use all of the given statements  $h \rightarrow 0$ ,  $\frac{\sin h}{h} \rightarrow 1$ ,

$$\frac{\cos h-1}{h} \rightarrow 0 \text{ meaning that the } \lim_{h \rightarrow 0} \frac{\sin(\theta+h)-\sin\theta}{(\theta+h)-\theta} = \cos\theta$$

and therefore the gradient of the chord  $\rightarrow$  gradient of the curve  $\Rightarrow \frac{dy}{d\theta} = \cos\theta$

| Question                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Scheme                                                                                                                                                                                                                                                                                                                                                                                                                 | Marks | AOs  |

**Question 12 continued****Notes:****(a)****M1:** Takes logs of both sides and shows the addition law**M1:** Uses the power law, writes  $\log_{10} N = \log_{10} a + b \log_{10} T$  and states  $m = b$  **and**  $c = \log_{10} a$ **(b)****M1:** Uses the graph to find either  $a$  or  $b$   $a = 10^{\text{intercept}}$  **or**  $b = \text{gradient}$ . This would be implied by the sight of  $b = 2.3$  **or**  $a = 10^{1.8} \approx 63$ **M1:** Uses the graph to find both  $a$  and  $b$   $a = 10^{\text{intercept}}$  **and**  $b = \text{gradient}$ . This would be implied by the sight of  $b = 2.3$  **and**  $a = 10^{1.8} \approx 63$ **M1:** Uses  $T = 3 \Rightarrow N = aT^b$  with their  $a$  and  $b$ . This is implied by an attempt at  $63 \times 3^{2.3}$ **A1:** Accept a number of microbes that are approximately 800. Allow  $800 \pm 150$  following correct work.

There is an alternative to this using a graphical approach.

**M1:** Finds the value of  $\log_{10} T$  from  $T = 3$ . Accept as  $T = 3 \Rightarrow \log_{10} T \approx 0.48$ **M1:** Then using the line of best fit finds the value of  $\log_{10} N$  from their "0.48"  
Accept  $\log_{10} N \approx 2.9$ **M1:** Finds the value of  $N$  from their value of  $\log_{10} N$   $\log_{10} N \approx 2.9 \Rightarrow N = 10^{2.9}$ **A1:** Accept a number of microbes that are approximately 800. Allow  $800 \pm 150$  following correct work**(c)****M1** For using  $N = 1000000$  and stating that  $\log_{10} N = 6$ **A1:** Statement to the effect that "we only have information for values of  $\log N$  between 1.8 and 4.5 so we cannot be certain that the relationship still holds". "We cannot extrapolate with any certainty, we could only interpolate"

There is an alternative approach that uses the formula.

**M1:** Use  $N = 1000000$  in their  $N = 63 \times T^{2.3} \Rightarrow \log_{10} T = \frac{\log_{10} \left( \frac{1000000}{63} \right)}{2.3} \approx 1.83$ .**A1:** The reason would be similar to the main scheme as we only have  $\log_{10} T$  values from 0 to 1.2. We cannot 'extrapolate' the graph and assume that the model still holds**(d)****B1:** Allow a numerical explanation  $T = 1 \Rightarrow N = a1^b \Rightarrow N = a$  giving  $a$  is the value of  $N$  at  $T = 1$

**Question 13 continued****Notes:****(a)**

**M1:** Attempts  $\frac{dy}{dx} = \frac{\frac{dy}{dt}}{\frac{dx}{dt}}$  and achieves a form  $k \frac{\sin 2t}{\sin t}$  Alternatively candidates may apply the

double angle identity for  $\cos 2t$  and achieve a form  $k \frac{\sin t \cos t}{\sin t}$

**A1:** Scored for a correct answer, either  $\frac{\sqrt{3} \sin 2t}{\sin t}$  or  $2\sqrt{3} \cos t$

**(b)**

**M1:** For substituting  $t = \frac{2\pi}{3}$  in their  $\frac{dy}{dx}$  which must be in terms of  $t$

**M1:** Uses the gradient of the normal is the negative reciprocal of the value of  $\frac{dy}{dx}$ . This may be seen in the equation of  $l$ .

**B1:** States or uses (in their tangent or normal) that  $P = \left(-1, -\frac{\sqrt{3}}{2}\right)$

**M1:** Uses their numerical value of  $-1/\frac{dy}{dx}$  with their  $\left(-1, -\frac{\sqrt{3}}{2}\right)$  to form an equation of the normal at  $P$

**A1\*:** This is a proof and all aspects need to be correct. Correct answer only  $2x - 2\sqrt{3}y - 1 = 0$

**(c)**

**M1:** For substituting  $x = 2\cos t$  and  $y = \sqrt{3} \cos 2t$  into  $2x - 2\sqrt{3}y - 1 = 0$  to produce an equation in  $t$ . Alternatively candidates could use  $\cos 2t = 2\cos^2 t - 1$  to set up an equation of the form  $y = Ax^2 + B$ .

**M1:** Uses the identity  $\cos 2t = 2\cos^2 t - 1$  to produce a quadratic equation in  $\cos t$   
In the alternative method it is for combining their  $y = Ax^2 + B$  with  $2x - 2\sqrt{3}y - 1 = 0$  to get an equation in just one variable

**A1:** For the correct quadratic equation  $12\cos^2 t - 4\cos t - 5 = 0$

Alternatively the equations in  $x$  and  $y$  are  $3x^2 - 2x - 5 = 0$   $12\sqrt{3}y^2 + 4y - 7\sqrt{3} = 0$

**M1:** Solves the quadratic equation in  $\cos t$  (or  $x$  or  $y$ ) and rejects the value corresponding to  $P$ .

**M1:** Substitutes their  $\cos t = \frac{5}{6}$  or their  $t = \arccos\left(\frac{5}{6}\right)$  in  $x = 2\cos t$  and  $y = \sqrt{3} \cos 2t$

If a value of  $x$  or  $y$  has been found it is for finding the other coordinate.

**A1:**  $Q = \left(\frac{5}{3}, \frac{7}{18}\sqrt{3}\right)$ . Allow  $x = \frac{5}{3}, y = \frac{7}{18}\sqrt{3}$  but do not allow decimal equivalents.

**Question 14 continued****Notes:****(a)**

**B1:** States or uses the strip width  $h = 0.5$ . This can be implied by the sight of  $\frac{0.5}{2}\{\dots\}$  in the trapezium rule

**M1:** For the correct form of the bracket in the trapezium rule. Must be  $y$  values rather than  $x$  values  $\{\text{first } y \text{ value} + \text{last } y \text{ value} + 2 \times (\text{sum of other } y \text{ values})\}$

**A1:** 4.393

**(b)**

**B1:** See scheme

**(c)**

**M1:** Uses integration by parts the right way around.

Look for  $\int x^2 \ln x \, dx = Ax^3 \ln x - \int Bx^2 \, dx$

**A1:**  $\frac{x^3}{3} \ln x - \int \frac{x^2}{3} \, dx$

**B1:** Integrates the  $-2x + 5$  term correctly  $= -x^2 + 5x$

**M1:** All integration completed and limits used

**M1:** Simplifies using  $\ln$  law(s) to a form  $\frac{a}{b} + \ln c$

**A1:** Correct answer only  $\frac{28}{27} + \ln 27$

| Question                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Scheme                                                                                                             | Marks      | AOs  |
